The Complete User Manual for Veristio.com

Introduction

Use the chapter that matches your goal. Availability is stated in plain language at the beginning of each feature section. A planned feature is not available to use today; follow only instructions identified as currently available.

Accounts and purchases

Public information is available without an account. Sign-in does not grant access to another person's information. Review the displayed price and terms before purchasing. If a payment or request is pending, do not submit it again until its status is clear.

Getting help

For Veristio.com customer questions, contact `support@veristio.com`. Include a brief description and a non-sensitive order reference if relevant. Never send passwords, recovery codes, payment-card details, or private customer files by email.

Finding Your Way Around Veristio.com

Start at [Veristio.com](https://veristio.com/) and use the visible navigation to browse products, services, company information, and support. Choose a link by its label, then confirm the destination heading before continuing. On a phone or narrow screen, open the site's menu and choose the same labeled destination.

Public information pages do not require an account. A sign-in or account control is needed only when a feature says so. Review the displayed price and terms before a purchase. If a page or request is unavailable, return to the home page or contact `support@veristio.com`.

Do not treat a public description as a purchase, account access, or proof that a planned feature is available. Never send passwords, recovery codes, payment-card details, or private customer files by email.

Site Orientation and Global Navigation

This section explains how to use the public information pages described here. Sign in only when a feature asks you to.

Purpose and intended user

This section helps a public visitor find and interpret the site's public information without assuming access to a protected service.

Requirements and access

Use a current browser and the site's visible header or footer. No account or entitlement is required for the routes covered here. On desktop, use the displayed header and footer links. On a narrow screen, use the header controls presented by the page before selecting a destination.

First use

1. Open the site home page.
2. Choose the visible link that matches your goal.
3. Confirm the destination heading and status language before acting.
4. Follow only controls whose destination and consequence are clear.

Controls and action consequences

Use visible links and controls according to their labels and the instructions on the page. A link changes the current destination or opens the destination identified by its label. A download link retrieves the named public resource. An email link prepares a message in the customer's email application; it does not submit an order, create an account, or guarantee a response. An external-retail link leaves the Veristio site and places subsequent account, payment, fulfillment, and recovery behavior under the named retailer.

Saved work, history, notifications, and delivery

The covered public navigation does not establish saved work, customer history, account notifications, or protected delivery. A browser may retain ordinary local history under the browser's own settings. Public file downloads are delivered through the browser.

Prices, entitlements, limits, and exclusions

A public information page does not make a product available for purchase or sign you into an account. Follow the instructions and terms shown on the relevant page.

Normal and exceptional states

The normal state is a public page with a heading and labeled navigation. A destination may instead be unavailable, external, a downloadable resource, or governed by a status notice. If a page is unavailable or a request is still processing, follow the message shown and contact support if needed.

Common mistakes

Check the feature's availability before starting, and follow the retailer's terms for purchases made there.

Recovery and support escalation

Use browser Back or return to the site home page if a destination is unavailable. Use the site's verified Contact or Support route for help. Never send passwords, payment-card data, private manuscripts, or customer records through a general email link.

Privacy, security, ownership, accessibility, and AI use

Public pages can be read without supplying private information. Link names and headings provide the primary navigation cues; keyboard and screen-reader users should follow the document order. External destinations have their own privacy and purchase terms.

Related features

Products, Services, Training, Company, Contact, Legal, Privacy, and Terms are the principal public orientation families.

Index terms: navigation, header, footer, mobile menu, contact, privacy, terms.

Product and Service Discovery

This section explains how to use the public information pages described here. Sign in only when a feature asks you to.

Purpose and intended user

This section helps a public visitor find and interpret the site's public information without assuming access to a protected service.

Requirements and access

Use a current browser and the site's visible header or footer. No account or entitlement is required for the routes covered here. On desktop, use the displayed header and footer links. On a narrow screen, use the header controls presented by the page before selecting a destination.

First use

1. Open the site home page.
2. Choose the visible link that matches your goal.
3. Confirm the destination heading and status language before acting.
4. Follow only controls whose destination and consequence are clear.

Controls and action consequences

Use visible links and controls according to their labels and the instructions on the page. A link changes the current destination or opens the destination identified by its label. A download link retrieves the named public resource. An email link prepares a message in the customer's email application; it does not submit an order, create an account, or guarantee a response. An external-retail link leaves the Veristio site and places subsequent account, payment, fulfillment, and recovery behavior under the named retailer.

Saved work, history, notifications, and delivery

The covered public navigation does not establish saved work, customer history, account notifications, or protected delivery. A browser may retain ordinary local history under the browser's own settings. Public file downloads are delivered through the browser.

Prices, entitlements, limits, and exclusions

A public information page does not make a product available for purchase or sign you into an account. Follow the instructions and terms shown on the relevant page.

Normal and exceptional states

The normal state is a public page with a heading and labeled navigation. A destination may instead be unavailable, external, a downloadable resource, or governed by a status notice. If a page is unavailable or a request is still processing, follow the message shown and contact support if needed.

Common mistakes

Check the feature's availability before starting, and follow the retailer's terms for purchases made there.

Recovery and support escalation

Use browser Back or return to the site home page if a destination is unavailable. Use the site's verified Contact or Support route for help. Never send passwords, payment-card data, private manuscripts, or customer records through a general email link.

Privacy, security, ownership, accessibility, and AI use

Public pages can be read without supplying private information. Link names and headings provide the primary navigation cues; keyboard and screen-reader users should follow the document order. External destinations have their own privacy and purchase terms.

Finding an offering

Open Products for the public product catalog or Services for service-family orientation. Read maturity and availability language on the destination page before using a contact or review-interest path. Product maturity does not prove checkout, entitlement, delivery, or service acceptance.

Index terms: products, services, maturity, review interest, availability.

Public Support and Recovery

This section explains how to use the public information pages described here. Sign in only when a feature asks you to.

Purpose and intended user

This section helps a public visitor find and interpret the site's public information without assuming access to a protected service.

Requirements and access

Use a current browser and the site's visible header or footer. No account or entitlement is required for the routes covered here. On desktop, use the displayed header and footer links. On a narrow screen, use the header controls presented by the page before selecting a destination.

First use

1. Open the site home page.
2. Choose the visible link that matches your goal.
3. Confirm the destination heading and status language before acting.
4. Follow only controls whose destination and consequence are clear.

Controls and action consequences

Use visible links and controls according to their labels and the instructions on the page. A link changes the current destination or opens the destination identified by its label. A download link retrieves the named public resource. An email link prepares a message in the customer's email application; it does not submit an order, create an account, or guarantee a response. An external-retail link leaves the Veristio site and places subsequent account, payment, fulfillment, and recovery behavior under the named retailer.

Saved work, history, notifications, and delivery

The covered public navigation does not establish saved work, customer history, account notifications, or protected delivery. A browser may retain ordinary local history under the browser's own settings. Public file downloads are delivered through the browser.

Prices, entitlements, limits, and exclusions

A public information page does not make a product available for purchase or sign you into an account. Follow the instructions and terms shown on the relevant page.

Normal and exceptional states

The normal state is a public page with a heading and labeled navigation. A destination may instead be unavailable, external, a downloadable resource, or governed by a status notice. If a page is unavailable or a request is still processing, follow the message shown and contact support if needed.

Common mistakes

Check the feature's availability before starting, and follow the retailer's terms for purchases made there.

Recovery and support escalation

Use browser Back or return to the site home page if a destination is unavailable. Use the site's verified Contact or Support route for help. Never send passwords, payment-card data, private manuscripts, or customer records through a general email link.

Privacy, security, ownership, accessibility, and AI use

Public pages can be read without supplying private information. Link names and headings provide the primary navigation cues; keyboard and screen-reader users should follow the document order. External destinations have their own privacy and purchase terms.

Getting help

Use Customer Help or Contact when those routes are visible. Select the role-based contact that matches the subject. A prepared email is not an order, activation, account change, or guaranteed response.

Index terms: customer help, contact, recovery, email, escalation.

Accounts and the Customer Portal

What this feature is

Create or recover a Veristio account, sign in, and reach the account-scoped customer portal.

Who it is for and what you need

This section is for customers using the feature described here. Use a current browser, an account when the procedure says one is required, and only information you are authorized to submit. A public information page does not complete a purchase or sign you in.

Where to find it

On desktop, use the site's visible navigation and confirm the destination heading. On mobile, use the navigation controls presented by the current page. Protected steps begin only after the service returns a verified account and entitlement state.

Available now

Status: available now

1. Open `/account/login`, `/account/register`, or `/account/recovery`.
2. Use `Email` and `Password`; registration labels the password `Password (12 or more characters)`.
3. Recovery uses `Email`, `Recovery code`, `New password`, and `Recover account and revoke prior sessions`.
4. Use `Customer Help` when self-service entry cannot continue.
5. The canonical signed-in destination is `the signed-in account page`.

Retired or replaced

Status: retired or replaced

- `the signed-in account page` is retired and redirects without carrying identifiers.

Returning, saving, history, notifications, and delivery

Return through the same canonical account or project entry point. Available project options are shown on the page. Features that are not listed there are not currently available. Do not repeat a

chargeable action merely because a confirmation is delayed. Use support with the non-secret reference shown by the service.

Prices, entitlements, limits, and responsibilities

Account creation is not itself a purchase. A capability-specific entitlement may still be required after sign-in.

Customers remain responsible for accurate contact and project information and for rights to submitted material. Veristio remains responsible only for the obligations stated by the verified service and governing terms.

Normal and exceptional states

Normal entry, validation error, recovery-code denial, expired or used resume token, inactive account denial, successful account-scoped portal, and revoked-session return to sign-in.

Validation must preserve entered non-secret data where safe, identify the affected field, and avoid implying success. Denial must not expose another account or project. Interrupted sessions should return through the canonical sign-in or project route, not through a copied private URL.

Not currently available

This feature, or the portion described here, is not currently available. Planned details may change before launch.

Common mistakes and recovery

Check your order status before taking another action if a confirmation is pending. Do not share passwords, recovery codes, gift certificate details, recovery codes, or payment-card data with general support. If a state is unclear, stop before resubmitting or paying and use Customer Help.

Privacy, security, ownership, accessibility, and AI

Submit the minimum information needed for the task. Account and project data must remain scoped to the authorized customer. Preserve ownership and usage rights for manuscripts, images, marks, and uploaded files. Use labeled controls in document order and report keyboard, focus, contrast, caption, or alternative-text barriers. AI-assisted output requires customer review; it does not replace professional legal, tax, financial, medical, or other licensed advice.

Support and open decisions

Related capabilities

Glossary and index terms

account, sign in, registration, recovery code, portal, session, logout, change email.

Purchases, Quotes, Orders, and Support

Planned capability: This section describes the approved intended customer experience. The capability is not yet fully available. Screens, labels, steps, prices, and limitations may be revised during implementation and verification.

What this feature is

Understand active prices, quote paths, checkout boundaries, cancellation, and recovery.

Who it is for and what you need

This section is for customers using the feature described here. Use a current browser, an account when the procedure says one is required, and only information you are authorized to submit. A public information page does not complete a purchase or sign you in.

Where to find it

On desktop, use the site's visible navigation and confirm the destination heading. On mobile, use the navigation controls presented by the current page. Protected steps begin only after the service returns a verified account and entitlement state.

Available now

Status: available now

1. Sign in before using an active service checkout.
2. The active catalog lists Monetization Analyst $99, Funding Intelligence $149, Deep Research $399, Patent Intelligence $199, Business Plan Generator $79, The Accountant $129, Technical Writer $249, Software Engineer $999, Mechanical Design Intelligence $749, and Electrical & Electronics Engineer $249, each one time.
3. Mechanical Engineer requires an accepted exact quote. Visual Communications Engineer requires an accepted custom quote and a $199 minimum deposit.
4. For a fixed-price service, review the displayed price and continue to secure payment-provider checkout.
5. For quote-priced work, submit scope first and accept the exact quote before payment.
6. If checkout fails, no charge is created; retry once or use `Customer Help`.
7. For one-time work, request cancellation before work begins. After work starts, refund eligibility is limited to law or verified billing error.

Planned customer procedure

Status: planned and not currently available

1. Gift-value application is described in the Gift Certificates chapter and is not available now.

Returning, saving, history, notifications, and delivery

Return through the same canonical account or project entry point. Available project options are shown on the page. Features that are not listed there are not currently available. Do not repeat a chargeable action merely because a confirmation is delayed. Use support with the non-secret reference shown by the service.

Prices, entitlements, limits, and responsibilities

Prices and purchase terms are shown before checkout. A receipt confirms only the transaction described on it.

Customers remain responsible for accurate contact and project information and for rights to submitted material. Veristio remains responsible only for the obligations stated by the verified service and governing terms.

Normal and exceptional states

Quote pending, quote accepted, checkout open, failed with no charge, duplicate request, payment confirmed, entitlement pending, fulfilled, cancellation requested, refunded, and disputed.

Validation must preserve entered non-secret data where safe, identify the affected field, and avoid implying success. Denial must not expose another account or project. Interrupted sessions should return through the canonical sign-in or project route, not through a copied private URL.

Not currently available

This feature, or the portion described here, is not currently available. Planned details may change before launch.

Common mistakes and recovery

Check your order status before taking another action if a confirmation is pending. Do not share passwords, recovery codes, gift certificate details, recovery codes, or payment-card data with general support. If a state is unclear, stop before resubmitting or paying and use Customer Help.

Privacy, security, ownership, accessibility, and AI

Submit the minimum information needed for the task. Account and project data must remain scoped to the authorized customer. Preserve ownership and usage rights for manuscripts,

images, marks, and uploaded files. Use labeled controls in document order and report keyboard, focus, contrast, caption, or alternative-text barriers. AI-assisted output requires customer review; it does not replace professional legal, tax, financial, medical, or other licensed advice.

Support and open decisions

Prices, taxes, discounts, and any gift-certificate option are shown on the relevant checkout page. Gift certificates are currently unavailable.

Related capabilities

Glossary and index terms

checkout, quote, deposit, order, receipt, failed payment, cancellation, refund, dispute.

Veristio Company Builder

Planned capability: This section describes the approved intended customer experience. The capability is not yet fully available. Screens, labels, steps, prices, and limitations may be revised during implementation and verification.

What this feature is

Move one company concept through a seven-stage guided business-building workspace.

Who it is for and what you need

This section is for customers using the feature described here. Use a current browser, an account when the procedure says one is required, and only information you are authorized to submit. A public information page does not complete a purchase or sign you in.

Where to find it

On desktop, use the site's visible navigation and confirm the destination heading. On mobile, use the navigation controls presented by the current page. Protected steps begin only after the service returns a verified account and entitlement state.

Available now

Status: available now

1. Open the public `Veristio Company Builder` page.
2. Review the $999 one-time Guided Standard offer, 60-day workspace, two operator review cycles, one same-company continuation pass, and up to three specialist recommendations.
3. Use `Start Company Builder` to enter the account path or `Already purchased? Sign in` when applicable.

Planned customer procedure

Status: planned and not currently available

1. After verified payment and entitlement, use the private workspace for Concept Discovery, Concept Analysis, Concept Development, Business Model and Monetization, Company Architecture, Step-by-Step Business Plan, and Build and Launch Preparation.
2. Save, return, revise, inspect history, receive reviewed deliverables, and export the Business Plan and completion summary.

Returning, saving, history, notifications, and delivery

Return through the same canonical account or project entry point. Available project options are shown on the page. Features that are not listed there are not currently available. Do not repeat a chargeable action merely because a confirmation is delayed. Use support with the non-secret reference shown by the service.

Prices, entitlements, limits, and responsibilities

$999 one time. No subscription. Legal, tax, accounting, investment, funding, patent, medical, licensed advice, formation, and filings are excluded.

Customers remain responsible for accurate contact and project information and for rights to submitted material. Veristio remains responsible only for the obligations stated by the verified service and governing terms.

Normal and exceptional states

Not entitled, payment pending, workspace active, stage saved, review requested, revision returned, completed, expired after the governed term, and support recovery.

Validation must preserve entered non-secret data where safe, identify the affected field, and avoid implying success. Denial must not expose another account or project. Interrupted sessions should return through the canonical sign-in or project route, not through a copied private URL.

Not currently available

This feature, or the portion described here, is not currently available. Planned details may change before launch.

Common mistakes and recovery

Check your order status before taking another action if a confirmation is pending. Do not share passwords, recovery codes, gift certificate details, recovery codes, or payment-card data with general support. If a state is unclear, stop before resubmitting or paying and use Customer Help.

Privacy, security, ownership, accessibility, and AI

Submit the minimum information needed for the task. Account and project data must remain scoped to the authorized customer. Preserve ownership and usage rights for manuscripts, images, marks, and uploaded files. Use labeled controls in document order and report keyboard, focus, contrast, caption, or alternative-text barriers. AI-assisted output requires customer review; it does not replace professional legal, tax, financial, medical, or other licensed advice.

Support and open decisions

This feature is not currently available.

Related capabilities

Glossary and index terms

Company Builder, Guided Standard, business plan, concept discovery, review cycle, export.

Gift Certificates

Gift certificates are currently unavailable. You cannot buy, claim, check a balance, redeem, transfer, refund, or recover a Veristio gift certificate today.

Planned purchaser experience

If introduced, a signed-in purchaser could choose one of the planned USD denominations: $25, $50, or $100. A purchaser could send the certificate to one recipient and correct the recipient's delivery address or request another delivery before the recipient claims it. Self-purchase is not planned.

Planned recipient experience

The recipient would sign in or create a Veristio account to claim the certificate. After claim, its balance would be bound to that account and could not be transferred. The recipient could apply part or all of the balance to eligible Veristio digital products and fixed-price services. Any remaining purchase amount would be paid separately. The balance would remain available for later eligible purchases.

Limits and support

Planned exclusions include physical goods, subscriptions and renewals, quotes, deposits, taxes, shipping, printing, materials, government fees, outside-provider charges, and other gift certificates. Gift value could not be combined with discounts or promotions. Planned certificates would not expire and would not be redeemable for cash, except where applicable law requires otherwise.

These are planned terms, not an available service or a promise of launch. Details may change before launch. For current questions, contact `support@veristio.com`; do not send payment details, passwords, recovery codes, or certificate secrets by email.

Active Services Directory

Purpose

Compare the thirteen services currently presented as available, understand price and scope, and choose fixed-price, project, or quote-first entry without confusing availability with completed fulfillment.

Intended user

prospective and returning customers comparing professional services

Availability status

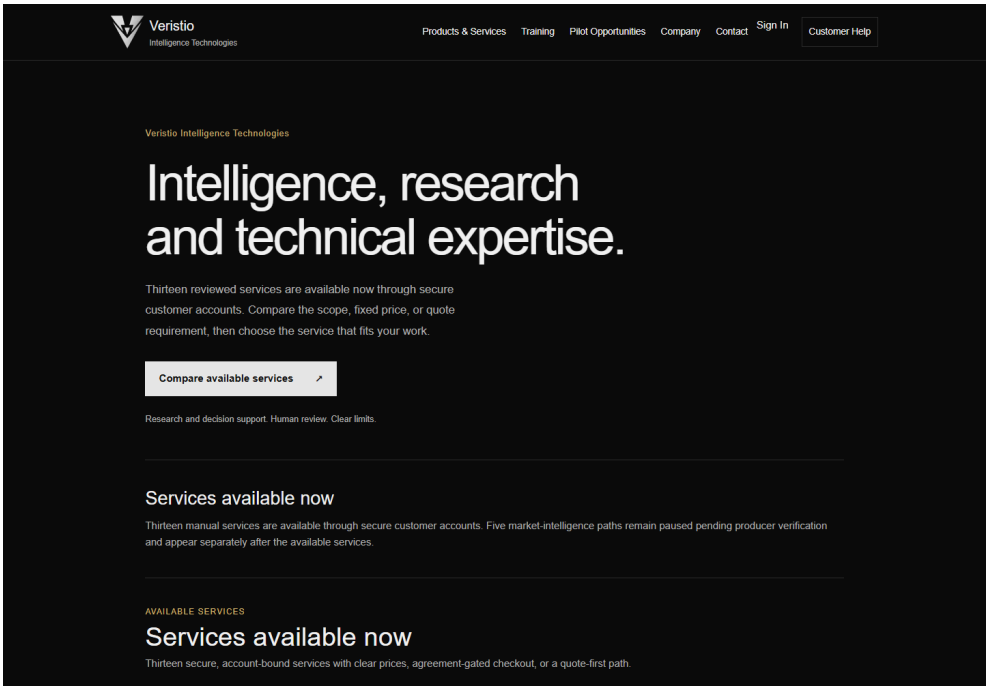

This chapter is partially available. Step-level status and current page labels govern when a workflow mixes public, protected, planned, or unverified behavior.

Requirements before starting

Use the site's visible navigation. Sign in when the feature asks you to, and submit only information you are allowed to share.

Desktop and mobile navigation

On desktop, use the labeled header, section links, and footer. On mobile, open the current menu, follow the same labels, and confirm the destination heading before entering information. Do not rely on the visual position of a control; use its label and surrounding status text.

Alternative text: Veristio home page with Products and Services, Training, Pilot Opportunities, Company, Contact, Sign In, and Customer Help navigation.

Figure SS-B4-001. Veristio home page showing the primary navigation and current service orientation.

First-time use

1. Open `Products & Services` and find `Services available now`.
2. Read the deliverable, limits, account requirement, and displayed price or quote rule.
3. Use `View details` before `Purchase`, `Start Project`, or `Request Quote`.
4. Sign in or create an account when redirected. Do not repeat checkout if confirmation is delayed.

Returning use

Return through the canonical public, account, or project entry. Confirm the customer, project, order, version, and status before continuing. Do not reuse an expired download, recovery, invitation, checkout, or old or expired link.

Fields controls and consequences

The directory uses `View details`, `Purchase`, `Start Project`, and `Request Quote`. Thirteen entries are available: Monetization Analyst $99; Funding Intelligence $149; Deep Research & Analyzation Engine $399; Patent Intelligence $199; Veristio Business Plan Generator

$79; Company Builder $999; The Accountant $129; Technical Writer $249; Visual Communications Engineer with a $199 minimum deposit after accepted quote; Software Engineer $999; Mechanical Engineer by accepted quote; Mechanical Design Intelligence $749; and Electrical & Electronics Engineer $249.

Submitting a form, saving a project, or purchasing may create a record or charge. Review the information and displayed terms first.

Normal and exceptional states

Public detail, signed-out return, authenticated intake, agreement required, quote pending, checkout preparation, payment confirmation pending, work not started, work active, correction requested, delivery ready, failed checkout with no charge, cancellation request, and support escalation.

Pending is not success. A public description is not an entitlement. A validation error should identify the affected input without exposing another customer or protected record.

Commercial rules

All listed fixed prices are one-time unless the page says otherwise. Quote services require acceptance before payment. Taxes, discounts, final scope, delivery timing, and refund outcome depend on the transaction and governing terms; no generalized promise is made.

Saving revision history notification and delivery

When available, use your account or project page to review saved work, messages, delivery, and correction options. Keep a copy of delivered files.

Privacy security ownership accessibility and AI use

Use the minimum information needed. Never place passwords, payment-card details, recovery codes, recovery codes, or unrelated customer data in a general message. Preserve rights and provenance for uploaded text and images. Keyboard order, focus visibility, labels, status announcements, contrast, captions, and alternative text remain part of acceptance. AI-assisted material requires human review and does not replace licensed professional judgment.

Common mistakes

If a confirmation is pending, check your order status before taking another action.

Recovery

Use `Customer Help` for billing, access, or delivery. Open `My Account` for an existing order. Do not email card details or start a second order merely because a status is pending.

Support escalation

Provide the route, date and time, device, visible message, and non-secret account, order, project, or application reference. Explain what you expected and what occurred. Do not include credentials or payment data.

Related features

Accounts, Purchases and Orders, Company Builder, Customer Projects, and Customer Help.

Glossary and index terms

active services, fixed price, quote, deposit, purchase, start project, customer account.

Paused Gated and Retired Offerings

Purpose

Interpret public product information without mistaking a demonstration, architecture page, or historical route for a purchasable offer.

Intended user

customers reviewing a product whose paid path is paused, gated, historical, or replaced

Availability status

This chapter is partially available. Step-level status and current page labels govern when a workflow mixes public, protected, planned, or unverified behavior.

Requirements before starting

Use the site's visible navigation. Sign in when the feature asks you to, and submit only information you are allowed to share.

Desktop and mobile navigation

On desktop, use the labeled header, section links, and footer. On mobile, open the current menu, follow the same labels, and confirm the destination heading before entering information. Do not rely on the visual position of a control; use its label and surrounding status text.

First-time use

1. Read the status text beside the product name.
2. Use public demonstrations only for context.
3. Do not attempt checkout when the page says paused or unavailable.
4. Use Customer Help for an existing obligation; do not infer a future restart date.

Returning use

Return through the canonical public, account, or project entry. Confirm the customer, project, order, version, and status before continuing. Do not reuse an expired download, recovery, invitation, checkout, or old or expired link.

Fields controls and consequences

The five paused market paths are Veristio Verified Intelligence Briefing, Genesis Yield Engine, Brokerless GYE Online, Webcaster, and AI Trading Strategist. VIB is a free dated historical demonstration. UltraPro routes are historical and superseded verification lineage, not a current offer. Retired account and billing routes redirect or return a terminal status without granting access.

Submitting a form, saving a project, or purchasing may create a record or charge. Review the information and displayed terms first.

Normal and exceptional states

Available public explanation, historical demonstration, checkout paused, producer verification pending, retired route, replacement route, existing-customer recovery, and no-current-offer.

Pending is not success. A public description is not an entitlement. A validation error should identify the affected input without exposing another customer or protected record.

Commercial rules

No new paid access is available for the five market paths. Earlier prices or provider objects do not override the current paused status. Existing obligations remain governed by their original transaction and support record.

Saving revision history notification and delivery

When available, use your account or project page to review saved work, messages, delivery, and correction options. Keep a copy of delivered files.

Privacy security ownership accessibility and AI use

Use the minimum information needed. Never place passwords, payment-card details, recovery codes, recovery codes, or unrelated customer data in a general message. Preserve rights and provenance for uploaded text and images. Keyboard order, focus visibility, labels, status announcements, contrast, captions, and alternative text remain part of acceptance. AI-assisted material requires human review and does not replace licensed professional judgment.

Common mistakes

If a confirmation is pending, check your order status before taking another action.

Recovery

Return to Products and Services, use the canonical account route for existing orders, or contact Customer Help. Never follow an old private URL or provider link as a bypass.

Support escalation

Provide the route, date and time, device, visible message, and non-secret account, order, project, or application reference. Explain what you expected and what occurred. Do not include credentials or payment data.

Related features

Products and Services, Customer Help, Market Intelligence, and Retired Routes.

Glossary and index terms

paused, gated, historical demonstration, unavailable, retired, replaced, VIB, GYE, UltraPro.

Customer Projects Uploads and Delivery

Purpose

Understand the intended account-scoped path for project records, intake, messages, revisions, status, downloads, and delivery when those features are available.

Intended user

authenticated customers with an admitted order or persistent project

Availability status

This chapter is availability not yet confirmed. Step-level status and current page labels govern when a workflow mixes public, protected, planned, or unverified behavior.

Requirements before starting

Use the site's visible navigation. Sign in when the feature asks you to, and submit only information you are allowed to share.

Desktop and mobile navigation

On desktop, use the labeled header, section links, and footer. On mobile, open the current menu, follow the same labels, and confirm the destination heading before entering information. Do not rely on the visual position of a control; use its label and surrounding status text.

First-time use

1. Sign in and open `My Account`.
2. Choose the named order or project; confirm its service and status before uploading.
3. Provide only files requested for that project and review validation results.
4. Use project messages for scoped questions and download only from the authorized delivery control.

Returning use

Return through the canonical public, account, or project entry. Confirm the customer, project, order, version, and status before continuing. Do not reuse an expired download, recovery, invitation, checkout, or old or expired link.

Fields controls and consequences

Your account shows the available actions and status for each order or project. Some services may not offer every option.

Submitting a form, saving a project, or purchasing may create a record or charge. Review the information and displayed terms first.

Normal and exceptional states

No orders, intake required, upload validating, quarantined, accepted, work not started, active, customer action required, revision requested, delivery ready, download authorization active, download expired, revoked, cancelled, refunded, and denied.

Pending is not success. A public description is not an entitlement. A validation error should identify the affected input without exposing another customer or protected record.

Commercial rules

Project access follows the purchased or quoted scope. A file upload does not expand scope. Valuable work and provider actions are not exercised for documentation verification.

Saving revision history notification and delivery

When available, use your account or project page to review saved work, messages, delivery, and correction options. Keep a copy of delivered files.

Privacy security ownership accessibility and AI use

Use the minimum information needed. Never place passwords, payment-card details, recovery codes, recovery codes, or unrelated customer data in a general message. Preserve rights and provenance for uploaded text and images. Keyboard order, focus visibility, labels, status announcements, contrast, captions, and alternative text remain part of acceptance. AI-assisted material requires human review and does not replace licensed professional judgment.

Common mistakes

If a confirmation is pending, check your order status before taking another action.

Recovery

Return through `the signed-in account page`, not a copied private download URL. Use Customer Help with the non-secret order reference. Expired downloads require renewed authorization, not credential sharing.

Support escalation

Provide the route, date and time, device, visible message, and non-secret account, order, project, or application reference. Explain what you expected and what occurred. Do not include credentials or payment data.

Related features

Accounts, Commerce, Company Builder, Binder Books, and Authors Resort.

Glossary and index terms

customer project, upload, quarantine, revision, history, notification, delivery, download.

Reports and Governed Intelligence

Purpose

Choose an available reviewed service, understand evidence and uncertainty, and separate a delivered report from legal, financial, engineering-certification, or investment advice.

Intended user

customers seeking research, analysis, planning, patent, funding, or technical decision support

Availability status

This chapter is partially available. Step-level status and current page labels govern when a workflow mixes public, protected, planned, or unverified behavior.

Requirements before starting

Use the site's visible navigation. Sign in when the feature asks you to, and submit only information you are allowed to share.

Desktop and mobile navigation

On desktop, use the labeled header, section links, and footer. On mobile, open the current menu, follow the same labels, and confirm the destination heading before entering information. Do not rely on the visual position of a control; use its label and surrounding status text.

First-time use

1. Open the relevant service detail page.
2. Review the required inputs, stated output, exclusions, price, and account requirement.
3. Use the fixed-price or quote path shown.
4. Review sources, assumptions, limitations, and uncertainty before acting on a delivered report.

Returning use

Return through the canonical public, account, or project entry. Confirm the customer, project, order, version, and status before continuing. Do not reuse an expired download, recovery, invitation, checkout, or old or expired link.

Fields controls and consequences

Available report-oriented services include Monetization Analyst, Funding Intelligence, Deep Research & Analyzation Engine, Patent Intelligence, Business Plan Generator, The Accountant, Technical Writer, Mechanical Design Intelligence, and Electrical & Electronics Engineer. Each page defines its own scope.

Submitting a form, saving a project, or purchasing may create a record or charge. Review the information and displayed terms first.

Normal and exceptional states

Public detail, intake incomplete, checkout pending, information received, analysis active, clarification required, report under review, delivered, correction requested, and support escalation.

Pending is not success. A public description is not an entitlement. A validation error should identify the affected input without exposing another customer or protected record.

Commercial rules

The public directory price applies only to the stated service scope. Third-party costs, filings, certification, fabrication, implementation, and licensed advice are outside unless separately agreed.

Saving revision history notification and delivery

When available, use your account or project page to review saved work, messages, delivery, and correction options. Keep a copy of delivered files.

Privacy security ownership accessibility and AI use

Use the minimum information needed. Never place passwords, payment-card details, recovery codes, recovery codes, or unrelated customer data in a general message. Preserve rights and provenance for uploaded text and images. Keyboard order, focus visibility, labels, status announcements, contrast, captions, and alternative text remain part of acceptance. AI-assisted material requires human review and does not replace licensed professional judgment.

Common mistakes

If a confirmation is pending, check your order status before taking another action.

Recovery

Use the order record and Customer Help. Preserve the delivered file and its version; request correction through the project rather than editing the evidence record silently.

Support escalation

Provide the route, date and time, device, visible message, and non-secret account, order, project, or application reference. Explain what you expected and what occurred. Do not include credentials or payment data.

Related features

Active Services, Customer Projects, Professional Book Reports, and Company Builder.

Glossary and index terms

report, governed intelligence, evidence, uncertainty, source, limitation, correction.

Troubleshooting Accessibility and Recovery

Purpose

Recover from navigation, account, checkout, project, download, or accessibility problems without repeating a risky action or exposing private information.

Intended user

any visitor or customer who cannot continue safely

Availability status

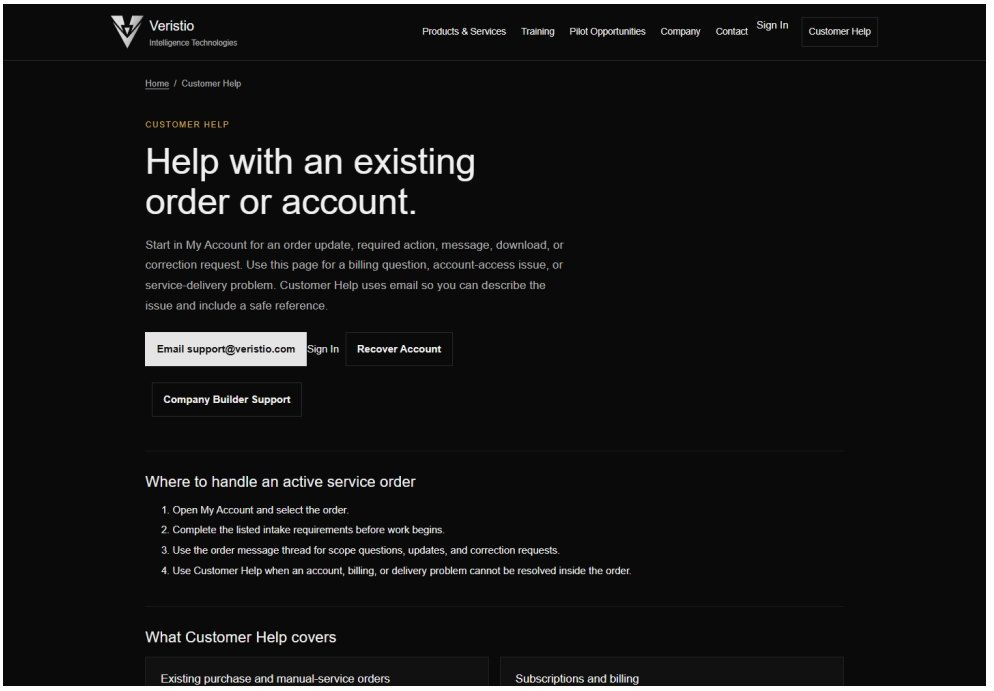

Public information is available now. Other options depend on the feature and are shown on its page.

Requirements before starting

Use the site's visible navigation. Sign in when the feature asks you to, and submit only information you are allowed to share.

Desktop and mobile navigation

On desktop, use the labeled header, section links, and footer. On mobile, open the current menu, follow the same labels, and confirm the destination heading before entering information. Do not rely on the visual position of a control; use its label and surrounding status text.

Alternative text: Veristio Customer Help page with account recovery and customer support navigation.

Figure SS-B4-004. Customer Help entry for account, billing, access, and delivery recovery.

First-time use

1. Read the visible status or error message before retrying.
2. Use browser Back only for public navigation; use the canonical account or project route for protected work.
3. Choose `Use recovery code`, `Customer Help`, or the service-specific support path.
4. Report the route, time, visible message, device, and non-secret reference.

Returning use

Return through the canonical public, account, or project entry. Confirm the customer, project, order, version, and status before continuing. Do not reuse an expired download, recovery, invitation, checkout, or old or expired link.

Fields controls and consequences

`Customer Help`, `Use recovery code`, `Create account`, `My Account`, `Sign out`, and service-specific support links are the primary recovery controls. A failed checkout message states that no charge was created when that is the verified outcome.

Submitting a form, saving a project, or purchasing may create a record or charge. Review the information and displayed terms first.

Normal and exceptional states

Page unavailable, validation error, invalid credentials, recovery denied, expired one-use link, failed checkout, pending confirmation, missing entitlement, expired download, inaccessible control, and successful recovery.

Pending is not success. A public description is not an entitlement. A validation error should identify the affected input without exposing another customer or protected record.

Commercial rules

Stop before retrying a potentially chargeable action. Support cannot confirm a charge from a screenshot alone; use the order and order confirmation available to the account.

Saving revision history notification and delivery

When available, use your account or project page to review saved work, messages, delivery, and correction options. Keep a copy of delivered files.

Privacy security ownership accessibility and AI use

Use the minimum information needed. Never place passwords, payment-card details, recovery codes, recovery codes, or unrelated customer data in a general message. Preserve rights and provenance for uploaded text and images. Keyboard order, focus visibility, labels, status announcements, contrast, captions, and alternative text remain part of acceptance. AI-assisted material requires human review and does not replace licensed professional judgment.

Common mistakes

If a confirmation is pending, check your order status before taking another action.

Recovery

Do not send passwords, recovery codes, card details, bank data, or private files through general email. For accessibility barriers, identify the control and requested accommodation.

Support escalation

Provide the route, date and time, device, visible message, and non-secret account, order, project, or application reference. Explain what you expected and what occurred. Do not include credentials or payment data.

Related features

Accounts, Commerce, Customer Projects, Contact, Privacy, and Security.

Glossary and index terms

troubleshooting, recovery, error, denial, expired, accessibility, Customer Help.

Privacy Security Ownership and AI Use

Purpose

Apply the public trust boundaries that protect customer identity, project data, intellectual property, payment handling, and human responsibility.

Intended user

every visitor and customer handling account, project, payment, or AI-assisted material

Availability status

Public information is available now. Other options depend on the feature and are shown on its page.

Requirements before starting

Use the site's visible navigation. Sign in when the feature asks you to, and submit only information you are allowed to share.

Desktop and mobile navigation

On desktop, use the labeled header, section links, and footer. On mobile, open the current menu, follow the same labels, and confirm the destination heading before entering information. Do not rely on the visual position of a control; use its label and surrounding status text.

First-time use

1. Read Privacy, Terms, and the service agreement before submitting sensitive or owned material.
2. Use the canonical account and secure payment-provider payment paths.
3. Confirm that you own or may use submitted files and facts.
4. Review AI-assisted output and preserve source and decision records.

Returning use

Return through the canonical public, account, or project entry. Confirm the customer, project, order, version, and status before continuing. Do not reuse an expired download, recovery, invitation, checkout, or old or expired link.

Fields controls and consequences

Trust controls include secure account entry, no-store protected responses, account-scoped data, password and recovery validation, provider-hosted payment collection, private downloads, revocation, and Customer Help. Administrative and provider-console controls are not customer procedures.

Submitting a form, saving a project, or purchasing may create a record or charge. Review the information and displayed terms first.

Normal and exceptional states

Consent absent or present, access allowed or denied, upload accepted or quarantined, session active or revoked, download active or expired, data correction requested, and support review.

Pending is not success. A public description is not an entitlement. A validation error should identify the affected input without exposing another customer or protected record.

Commercial rules

Payment-card details are collected by the named payment provider, not general support. Service purchase does not transfer customer ownership except as stated by the agreement.

Saving revision history notification and delivery

When available, use your account or project page to review saved work, messages, delivery, and correction options. Keep a copy of delivered files.

Privacy security ownership accessibility and AI use

Use the minimum information needed. Never place passwords, payment-card details, recovery codes, recovery codes, or unrelated customer data in a general message. Preserve rights and provenance for uploaded text and images. Keyboard order, focus visibility, labels, status announcements, contrast, captions, and alternative text remain part of acceptance. AI-assisted material requires human review and does not replace licensed professional judgment.

Common mistakes

If a confirmation is pending, check your order status before taking another action.

Recovery

Report suspected account or data exposure promptly through Customer Help. Revoke the session through sign-out when safe and use recovery when credentials may be compromised.

Support escalation

Provide the route, date and time, device, visible message, and non-secret account, order, project, or application reference. Explain what you expected and what occurred. Do not include credentials or payment data.

Related features

Legal and Trust, Account, Commerce, Customer Projects, and AI Watermarking at Veristio Press.

Glossary and index terms

privacy, security, ownership, intellectual property, AI-assisted, payment provider, session.

Glossary and Index

Purpose

Provide one reference for status, account, commerce, project, evidence, and support terms used throughout the manual.

Intended user

readers looking up Veristio terminology and manual destinations

Availability status

Public information is available now. Other options depend on the feature and are shown on its page.

Requirements before starting

Use the site's visible navigation. Sign in when the feature asks you to, and submit only information you are allowed to share.

Desktop and mobile navigation

On desktop, use the labeled header, section links, and footer. On mobile, open the current menu, follow the same labels, and confirm the destination heading before entering information. Do not rely on the visual position of a control; use its label and surrounding status text.

First-time use

1. Find the term alphabetically.
2. Follow the named related chapter.
3. Treat a status definition as a boundary, not as proof of a transaction.

Returning use

Return through the canonical public, account, or project entry. Confirm the customer, project, order, version, and status before continuing. Do not reuse an expired download, recovery, invitation, checkout, or old or expired link.

Fields controls and consequences

Key terms include account, active service, available now, checkout, customer project, delivery, entitlement, evidence, fixed price, historical demonstration, planned usage, quote, recovery code, retired, secure payment-provider checkout, not currently available, and workspace.

Submitting a form, saving a project, or purchasing may create a record or charge. Review the information and displayed terms first.

Normal and exceptional states

Definitions retain the status used by the applicable chapter: available, planned, not currently available, partially available, or retired.

Pending is not success. A public description is not an entitlement. A validation error should identify the affected input without exposing another customer or protected record.

Commercial rules

Price and policy definitions point to the governing service and commercial matrix; this glossary does not create a price or entitlement.

Saving revision history notification and delivery

When available, use your account or project page to review saved work, messages, delivery, and correction options. Keep a copy of delivered files.

Privacy security ownership accessibility and AI use

Use the minimum information needed. Never place passwords, payment-card details, recovery codes, recovery codes, or unrelated customer data in a general message. Preserve rights and provenance for uploaded text and images. Keyboard order, focus visibility, labels, status announcements, contrast, captions, and alternative text remain part of acceptance. AI-assisted material requires human review and does not replace licensed professional judgment.

Common mistakes

If a confirmation is pending, check your order status before taking another action.

Recovery

Use chapter cross-references and Customer Help when a term does not match the current screen.

Support escalation

Provide the route, date and time, device, visible message, and non-secret account, order, project, or application reference. Explain what you expected and what occurred. Do not include credentials or payment data.

Customer Help and Contact

This appendix contains only customer support guidance. Availability, prices, and terms shown on the relevant product page govern.

- Veristio.com customer help: `support@veristio.com`
- Veristio Press customer and publishing help: `press@veristio.com`

Do not send passwords, recovery codes, payment-card data, private access links, or unpublished customer material by email.

Customer Reference

Troubleshooting

1. Read the message shown and avoid repeating a purchase or submission that may still be processing.
2. Return to the site using its visible navigation.
3. If the issue remains, contact `support@veristio.com` with a brief description and a non-sensitive order reference.

Privacy and accessibility

Do not include passwords, recovery codes, payment details, private links, or customer files in general messages. Use keyboard-operable controls and contact support if an accessibility barrier prevents you from completing a task.

Glossary

- **Account:** your sign-in identity for Veristio services.
- **Pending:** a request has started but is not yet complete.
- **Planned:** a described feature is not currently available and may change before launch.
- **Recipient:** the person intended to receive a gift certificate.
